Bright TV Viewership Analysis

Where every screen comes to Life

Family Time

Presented By Kamva NGQ

Date: 19 April 2025

INTRODUCTION

(1)Bright Tv viewership data analysis

(2)Analyse user behaviour

(3)Day-wise viewership analysis

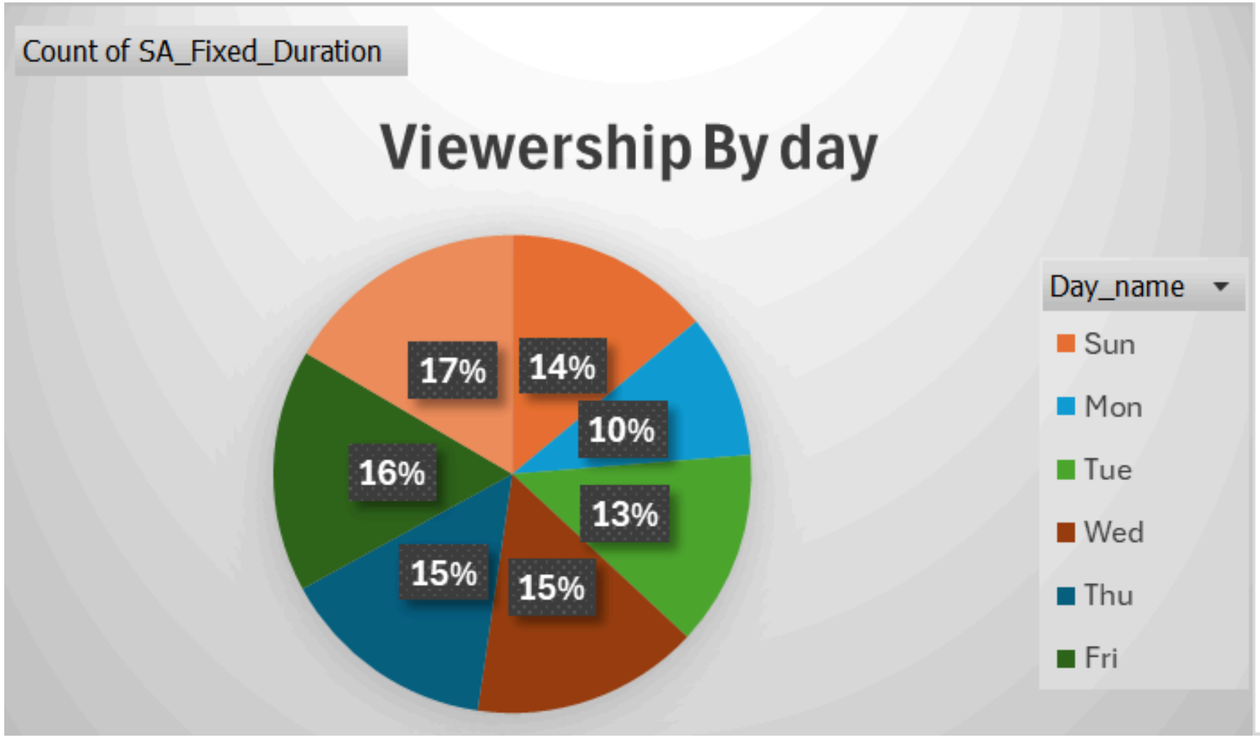
(4) Viewing patterns and trends

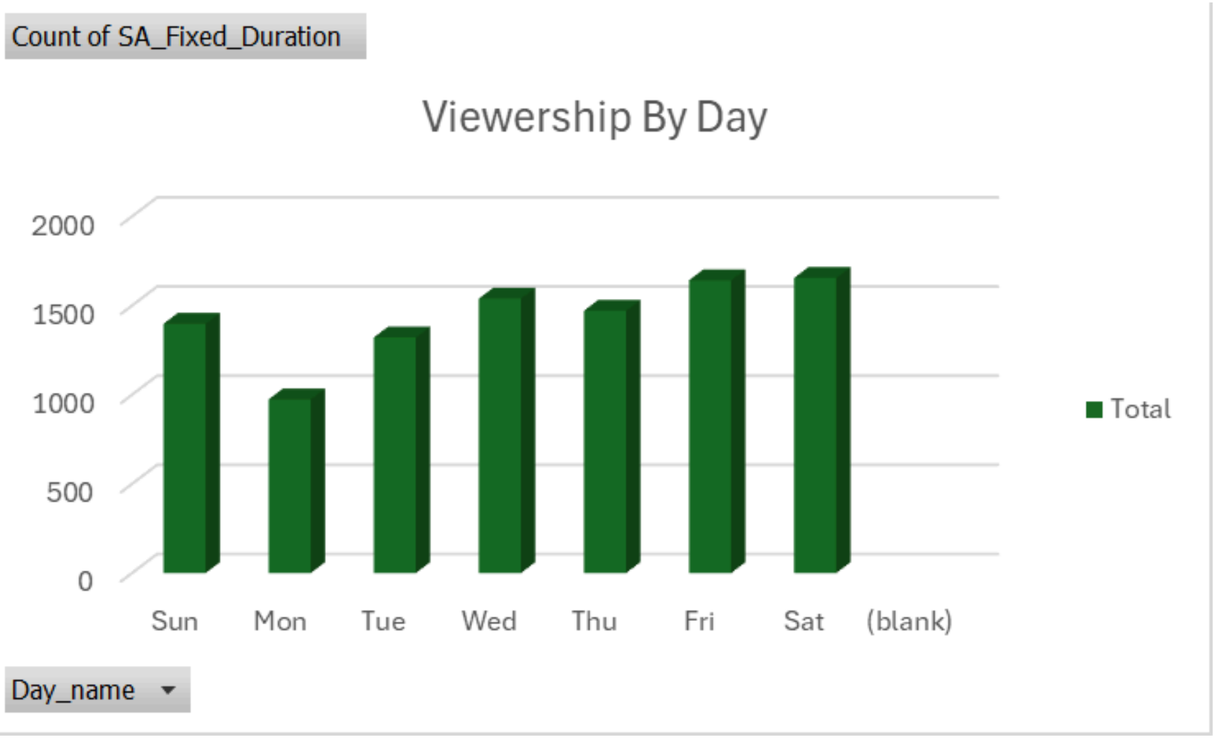
(5) Business Imlications

(6) Recommendations

Viewership by day

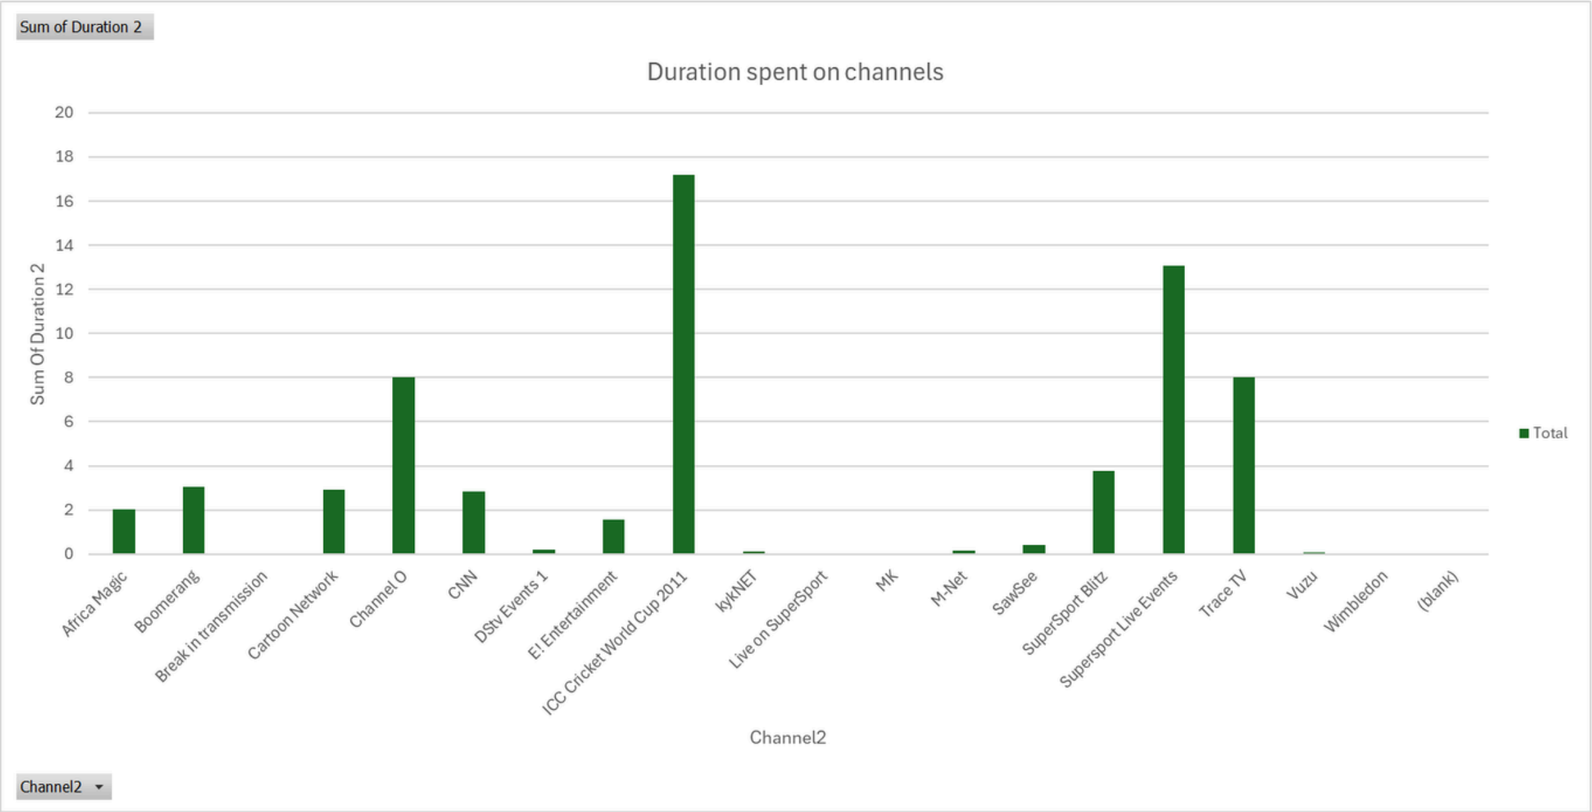
Insights: Viewership increased significantly on Friday, likely due to weekend effect





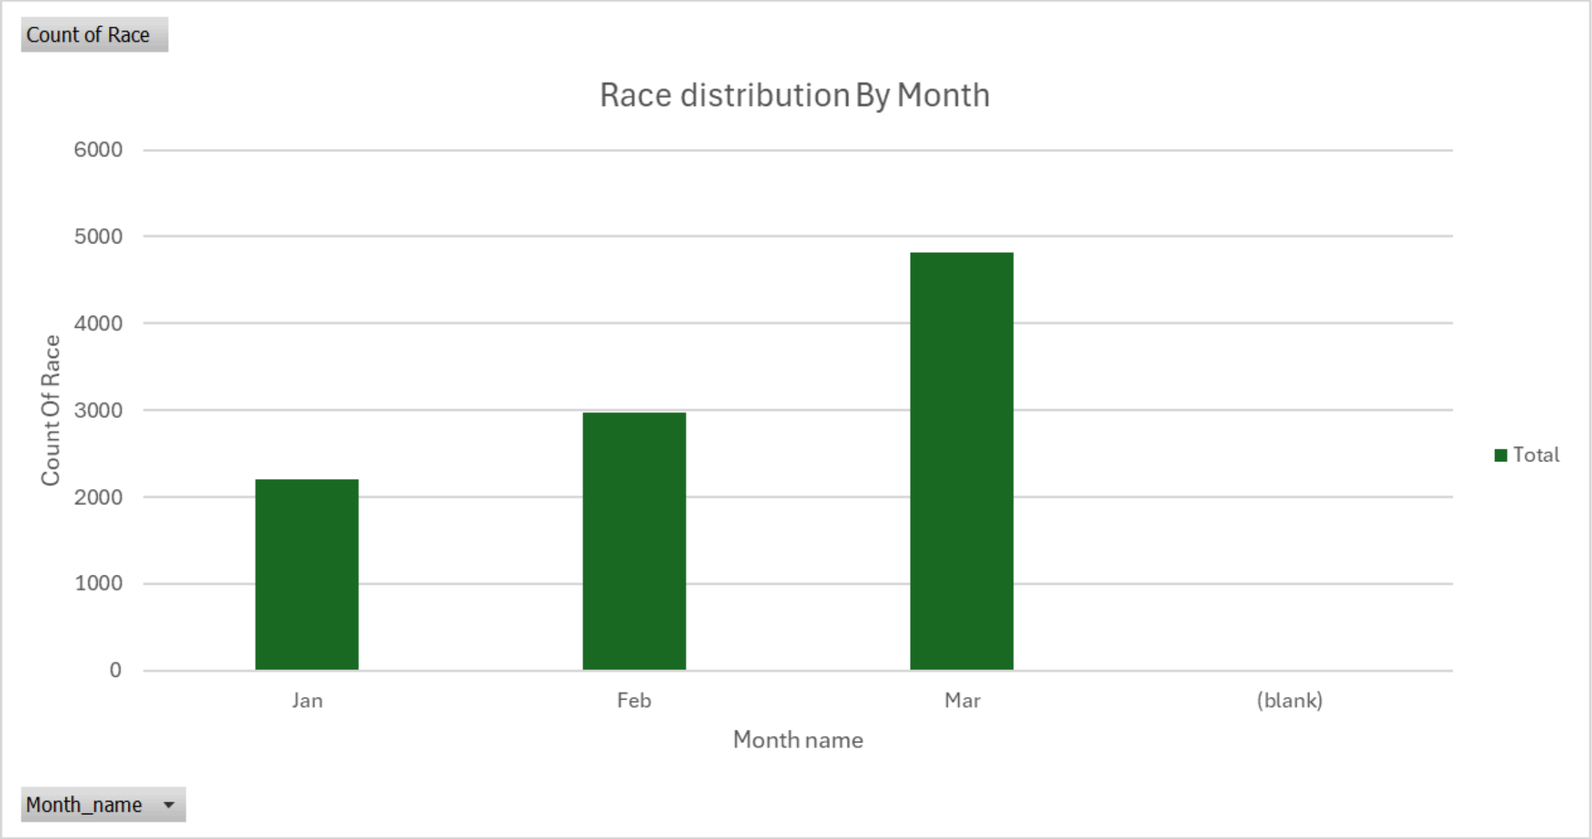
Duration spent on channels

Insights: There is a significant increase in viewership for the ICC cricket world cup 2011, indicating a strong preference for sports content



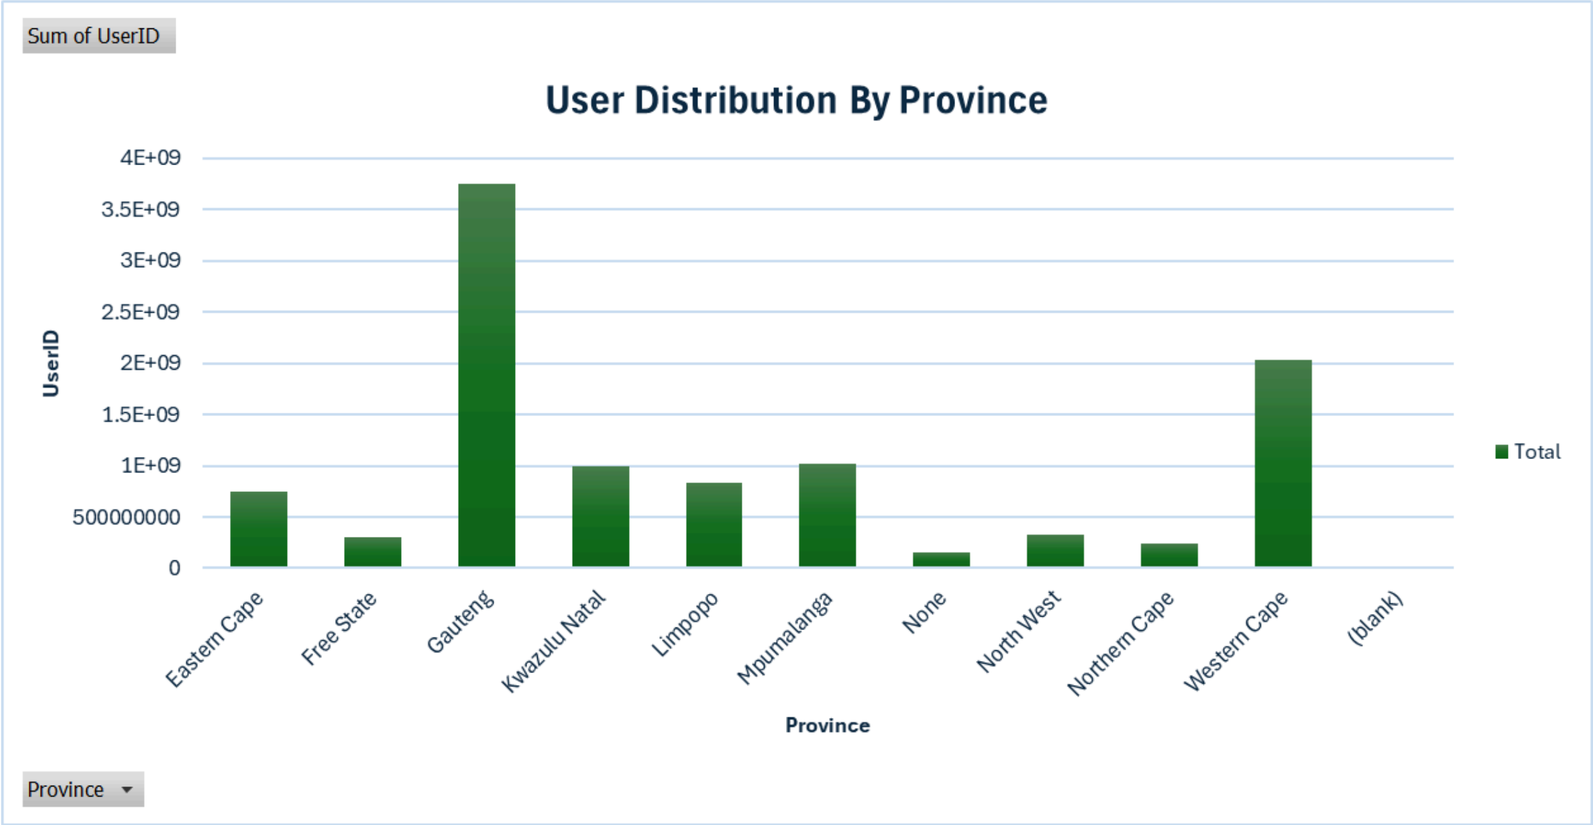
Count of Race by Month

Insights: The Increase in march is due to seasonal prgramming changes, major sporting events, and increased leisure time during holidays and weekends



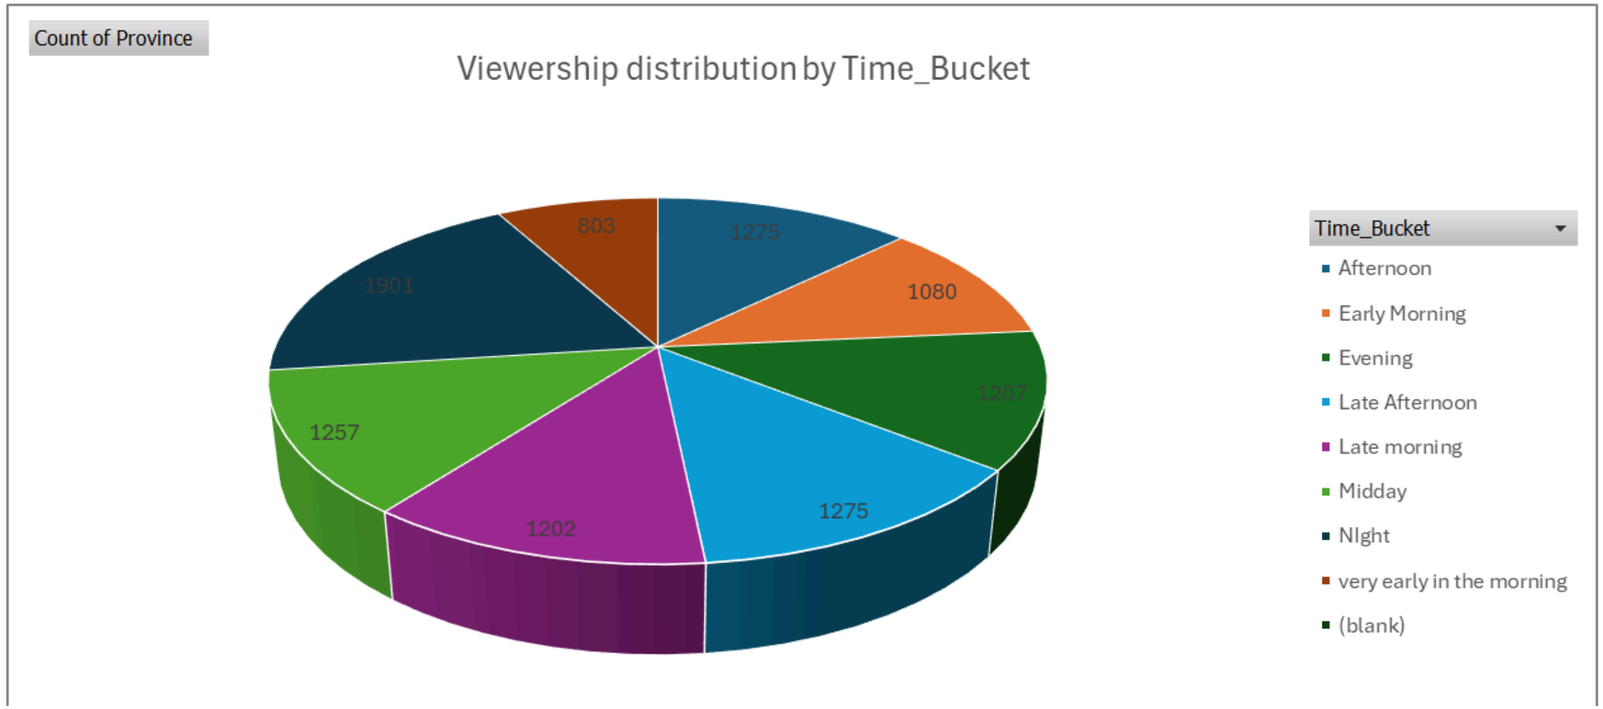
User distribution by Province

Insights: Gauteng and western cape have the highest Tv consumption due to urbanisation, better infrastucture, stronger access to entertainment content



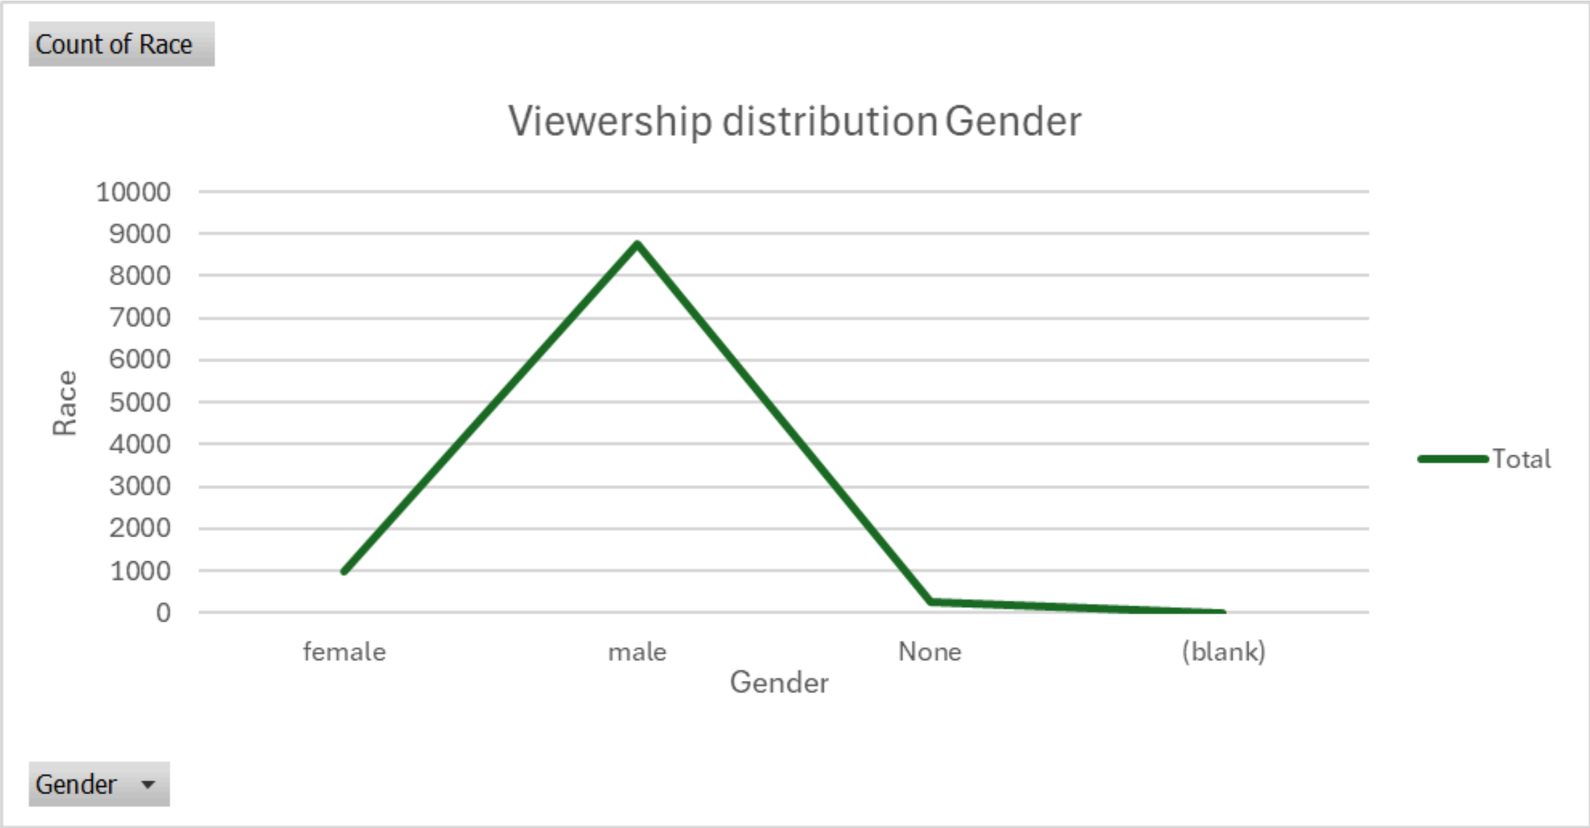
Viewership by Time_Basket

Insights: Late afternoon viewing is high due to people finishing work or school and using Tv as a form of relaxation before evening activities



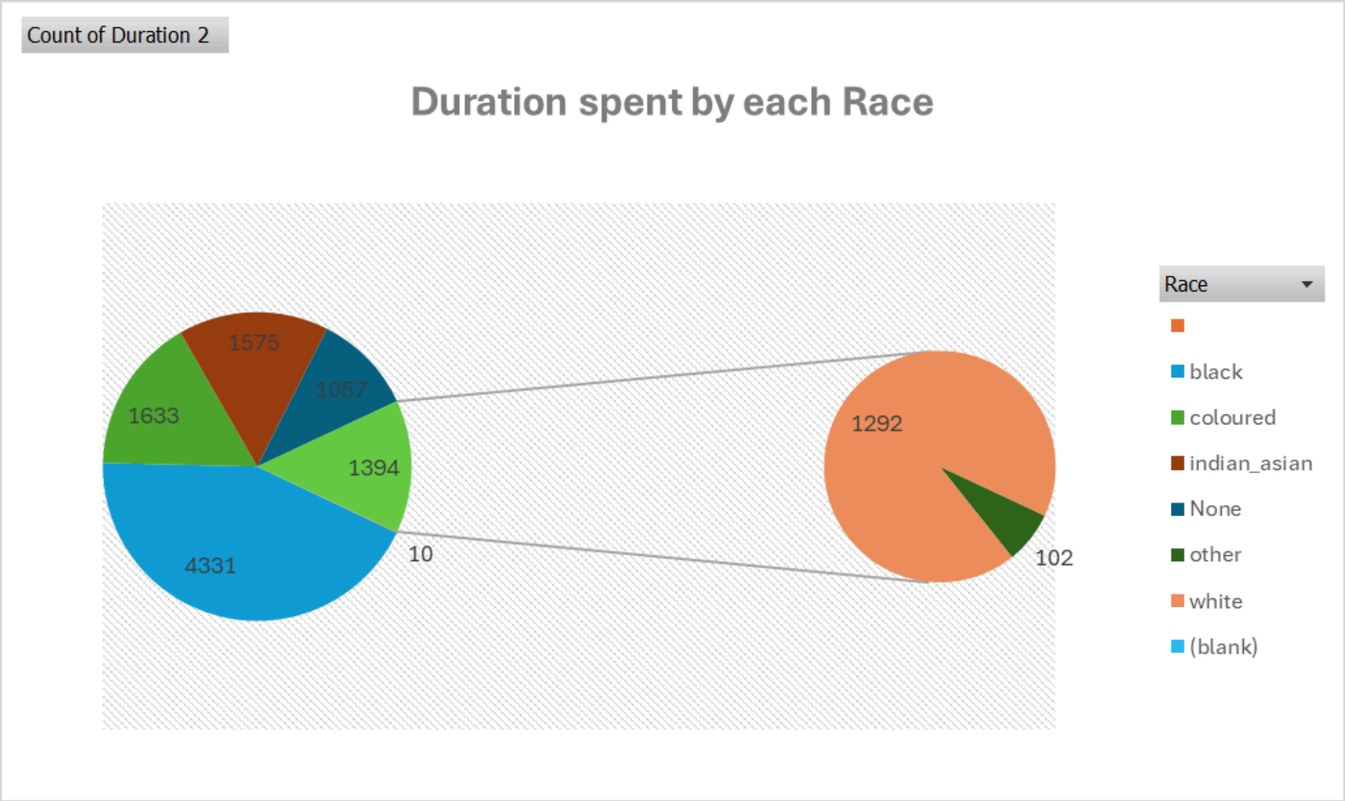
Viewership by Gender

Insights: Viewership is the highest among males, due to stronger engangement with sports and entertainment content, as well as higher overall TV consumption with this group



Duration spent by each Race on TV

Insights: Black is dominant because they have higher volume of entries compared to all other tracked groups



Business implications

(1) Users are mostly active after work

(2) Male Users are the largest audience segment

(3) Viewership is concentrated in urban, high-access provinces

Recommendations

(1) Targt male viewers with more sport and action based content, and offer tailored subscription bundles to increase conversion

(2) Focus marketing campaigns and oartnerships in these provinces while improving outreach in low-viewerships regions

(3) Schedule advertisements and release new content during late afternoon and evening peak periods to maximise engagement and revenue

Conclusion
